## A new and very simple plate processing platform for printers looking to get started with CtP processing

There are a number of reasons why Glunz & Jensen is the preferred processor supplier in the pre-press market. One very important reason is that Glunz & Jensen processors are verified to provide long lasting, stable and reliable processing solutions worldwide.

With this in mind, the company is now launching an addition to their mid-range plate processors - Gecko for violet polymer and thermal plates. A very simple processing platform that meets the needs and requirements of most printers that want to get started with true CtP processing.

Gecko plate processor family is Glunz & Jensen's new basic processing platform, recommended for printers with an annual production of up to typically 12,500 m<sup>2</sup>/year (134,550 ft<sup>2</sup>/year). The plate processor is built by using Glunz & Jensen's technology, components and quality, and based on the knowledge and experiences from the more advanced and highly recognised processor families.

The Gecko is a simple processing solution with a basic range of configuration options that meets the requirements of most printers in either an offline or an online version for thermal, violet or conventional applications.

Business Unit Director, Simon Jensen, has no doubt in mind that Gecko will become yet another Glunz & Jensen processor winner in today's pre-press market.

"Printers looking to get started with CtP processing, should really have a look at Gecko... You can rest assured that Glunz & Jensen is the safe choice for a trusted and reliable processing solution".

"It is dependable, simple to use, easy to install, and due to the reuse of our trusted developing technology, it delivers the Glunz & Jensen processing quality, which is now available and beneficial for all the smaller printing offices and houses."

"Already within the first two days of launch, we sold the first 10 Geckos."

## **The company**

Glunz & Jensen develops, manufactures and markets integrated and innovative solutions for the prepress industry.

Glunz & Jensen's products and solutions cover almost all equipment used in the prepress process in modern printing houses. The largest product area is CtP plate processors, but Glunz & Jensen also focuses on other product areas, including iCtP plate setters, plateline equipment, punch & bend equipment, stackers and software for monitoring and managing the complete prepress processes. Glunz & Jensen has achieved a leading position and a high market share within its core areas, and Glunz & Jensen's products are known for setting the technological standard on the global market.

Glunz & Jensen markets its products through an extensive network of distributors and dealers, and a large part of sales also takes place through OEM customers which include Agfa, Fuji, Heidelberg and Kodak. Glunz & Jensen enjoys close partnerships with several of its OEM customers – partnerships which also include developing new and innovative solutions for the prepress industry.
