FOR IMMEDIATE RELEASE

June 19, 2009

Glunz & Jensen moves iCtP PlateWriter Training to the Midwest Facility

Granger Indiana – Glunz & Jensen has centralized its iCtP training, support and logistics to its Granger Indiana facility, just 100 miles from Chicago.

“ The central location better meets the needs of our customer for shipping and distribution of plates and consumables, while allowing for customers and dealers to take advantage of such accessible international airport and major hubs as Chicago O’Hare International Airport and Chicago Midway Airport in, nearby, Chicago Illinois”, said Mark Baker-Homes, Business Unit Director, iCtP.

With the success of Glunz & Jensen’s iCtP and over 200 PlateWriter units sold this year, there is a higher demand from dealers across the US to become part of the iCtP program, and to have their technicians and support teams trained. The close connection to international airports such as O’Hare and Midway allows for economical flights from anywhere in the North America and South America.

Glunz & Jensen’s expansive facility, home of the Punch /-Bend and Press Registration equipment divisions, now also houses iCtP training for North and South America. Operating out of one location allows for large dealers to extend their training to all products offered by Glunz & Jensen, including processors, punch/ bend and press registration. For those attending iCtP, the classroom offers full access to working PlateWriter 2400 and PlateWriter 2000 with Rips set up on both PC and Mac. A precision light table and Epson proof printer allows for student to experience real world production within the training facility.

All students will tour the warehouse as well as meet the logistics and support personnel, as Glunz & Jensen insists on putting a name to a face and having direct customer relationships.

The Midwestern location acts as a centralized distribution center to provide the most economical shipping of consumables, iCtP units and spare parts for Glunz & Jensen’s customers in the western hemisphere. This new service includes door-to-door same day special deliveries upon request. In these economically challenging times, short shipping distances equals savings and a Midwest location makes sense.

Glunz & Jensen develops, manufactures, and markets equipment for the prepress industry. The product range covers almost all equipment used in prepress for offset printing in modern printing houses. At Glunz & Jensen, 98% of the products are exported worldwide through dealers, OEM and private label customers. Glunz & Jensen has achieved a leading position and is holding a market share of more than 50% within CtP plate processors.
